

**NATURAL &
ORGANIC**

BioActive™ ALL-PURPOSE FERTILIZER

CONTAINS MYCORRHIZAL FUNGI

Plants that absorb more nutrients become more flavorful and nutritious, making your food all the better. When your garden, beds, or lawn need more fertility without requiring the volume of compost, use Purple Cow BioActive™ All-Purpose Fertilizer. This is an organic 4-6-4 granular fertilizer inoculated with Mycorrhizal Fungi. These fungi may improve nutrient and water uptake by plants. Mix in with your growing media or simply topdress and water in.

“THIS YEAR ALL OF OUR FLOWERS WERE...FERTILIZED WITH BIOACTIVE TWICE. WE’VE HAD TRIPLE THE AMOUNT OF FLOWERS, NO LEAF BURN, NO DISEASE...THEY ARE CURRENTLY THRIVING AND THE MOST BEAUTIFUL I’VE EVER GROWN.”

Ingredients:

- Humic Acid
- Composted Turkey Litter
- Feather Meal
- Sulfate of Potash
- Mycorrhizae Fungi

Guaranteed Analysis

- Nitrogen (N)..... 4%
- Available Phosphate (P2O5)..... 6%
- Soluble Potash (K2O)..... 4%
- Calcium (Ca)..... 1%
- Magnesium (Mg)..... 1%
- Sulfur (S)..... 3%
- Boron (B)..... 0.05%
- Copper (Cu)..... 0.05%
- Iron (Fe)..... 0.5%
- Manganese (Mn)..... 0.05%
- Molybdenum (Mo)..... 0.05%
- Zinc (Zn)..... 0.05%

CONTAINS ESSENTIAL
MINERALS FOR MORE
NUTRITIOUS VEGETABLES

APPLICATION INSTRUCTIONS:

For Vegetables and Herbs:

Evenly sprinkle on soil surface,
1 Tbsp per square foot. (1/2 to
1-1/2 Cups per 4'x8' area, or
2-5 Cups per 100 square feet).
Repeat application when plants
blossom. Double for tomatoes.

1 TBSP

Annual & Perennial Flowers:

Evenly sprinkle on soil surface,
2-4 Tbsp per square foot. (3-7
Cups per 4'x8' are, or 10-20 lbs
per 100 square feet). Repeat
application when plants blossom.

2-4 TBSP

Container Gardening:

Evenly sprinkle on soil surface,
or mix into soil for faster results. 2
Tbsp per 6" pot. (4 Cups per 5 Gal
pot). Repeat application when
plants blossom.

2 TBSP

"IT WORKED! I KNEW THAT IT WOULD. I LOVE
PURPLE COW ORGANICS SOIL, COMPOST TEA,
AND BIOACTIVE FERTILIZER!"

- Kim VanderWerf, PCO Customer

Why are microbes needed?

Microbes are needed because they are the keys to growing anything. They are microscopic life-forms that inhabit your soil, and process the nutrients and organic matter, then make everything available for your plants to absorb. For example, you might think that when you spread fertilizer on "healthy soil," you're feeding your plants. Not quite. The microbes must first process the nutrients in the fertilizer into forms that your plants can absorb and use.
